

# Pest Alert: Colorado potato beetle (*Leptinotarsa decemlineata*)

Fig 1. Adult Colorado beetle on foliage © Fera Science Ltd

Fig 2. Colorado beetle larva © Fera Science Ltd

- The Colorado potato beetle (*Leptinotarsa decemlineata*) is a serious pest of potato, present in the EU, but **absent from the UK**.
- Originally found in North America, it was introduced to Europe and Central Asia in the 1950's and has since spread further eastwards and westwards.
- The beetle causes **20-100% reduction in potato yield** through feeding on foliage, and damages aubergines and tomato plants by eating early fruit.
- In May 2015 there was a UK finding linked to imported French potatoes. As well as entering the UK on potatoes, beetles are also occasionally imported as hitchhikers on non-host plant material, such as leafy vegetables, salad leaves, fresh herbs and grain.
- **Adult Colorado beetles** have a **distinctive yellow and black pattern**, and are **10-12 mm in length**. (Fig 1.) **The larvae** (Fig 2.) also have a distinctive look being **round and globular and approximately 15 mm in length**.

**If you suspect the presence of the pest, please inform the relevant authority (see over for details).**

For **England and Wales**, contact your local **APHA Plant Health and Seeds Inspector** or the **PHSI Headquarters**, York.

Tel: 0300 1000 313 (please select option 3 when calling)

Email: [planthealth.info@apha.gov.uk](mailto:planthealth.info@apha.gov.uk)

For **Scotland**, contact the **Scottish Government's Horticulture and Marketing Unit**:

Agricultural crops contact the local RPID officer: <http://www.gov.scot/Topics/farmingrural/Agriculture/AOcontacts/contacts>

For non-agricultural crops, email: [hort.marketing@gov.scot](mailto:hort.marketing@gov.scot)

For **Northern Ireland**, contact the **DAERA Plant Health Inspection Branch**:

Tel: 0300 200 7847 Email: [planthealth@daera-ni.gov.uk](mailto:planthealth@daera-ni.gov.uk)
